

CHAPTER – 10
SCOPE FOR FUTURE WORK

1. The investigated inhibitors may be tested for other metals like aluminium, copper, brass and zinc.
2. Corrosion inhibition studies may also be carried out in phosphoric acid medium, nitric acid medium, in alkaline and neutral medium.
3. Cyclic voltametry studies can be carried out using the investigated inhibitors.
4. The study can be extended to binary acid mixtures as they are often used in industry.
5. The synthesized compounds can be tested for their validity in electroplating industries.
