Section	Contents	Page No.
CHAPTER I		
INTRODUCTION		
1.1	Metals and alloys	1
1.2	Corrosion - Metal degradation	2
1.3	Necessity for corrosion studies	3
1.4	Impact of corrosion	3
1.5	Forms of corrosion	4
1.6	Factors affecting corrosion	9
	1.6.1 Nature of the metal	9
	1.6.2 Nature of the corroding environment	11
1.7	Inhibitors	12
1.8	Corrosion protection methods	15
1.9	Factors responsible for the effective working of the inhibitor	16
1.10	Mechanism of inhibitive effect of inhibitor	16
1.11	Monitoring of corrosion	17
1.12	References	24
CHAPTER II		
AN ECOFRIENDLY APPROACH TOWARDS MITIGATION OF MILD STEEL CORROSION IN SULPHURIC ACID MEDIUM BY ACID AND ETHANOL EXTRACTS OF GREEN MATERIALS AS CORROSION INHIBITORS – POTENTIAL AND VIABLE INHIBITORS FOR MATERIAL SHIELDING		
2.1	Introduction	27
2.2	Review of literature	28
2.3	Experimental materials and methods	33
	2.3.1 Preparation of sulphuric acid and ethanol solutions	33
	2.3.2 Preparation of metal samples	33
	2.3.3 Preparation of acid and ethanol extracts	34
	2.3.4 Spectral analysis	34
	2.3.5 Non–electrochemical techniques	35

Section	Contents	Page No.
	2.3.6 Electrochemical techniques	36
	2.3.7 Surface morphological studies	37
	2.3.8 Quantum chemical study	39
2.4	Results and Discussions	39
	2.4.1 Exploration of plant extracts	39
	2.4.2 Mass loss measurements	47
	2.4.2.1 Influence of concentration of the inhibitor on protection efficiency	47
	2.4.2.2 Influence of temperature on protection efficiency	48
	2.4.2.3 Activation parameters for inhibition process	48
	2.4.2.4 Adsorption Isotherm	50
	2.4.2.5 Thermodynamic parameters for acid/ethanol extracts	52
	2.4.3 Electrochemical measurements	53
	2.4.4 Surface morphological studies	57
	2.4.5 Quantum chemical study	60
2.5	Mechanism of Inhibition	61
2.6	Conclusions	63
2.7	References	65
CHAPTER III		
DEVELOPMENT OF DEFENSIVE FILM AND AUGMENTATION OF CORROSION RESISTANCE OF MILD STEEL IN SULPHURIC ACID BY MICROWAVE ASSISTED SULPHAMETHAZINE DERIVATIVES - EXPERIMENTAL AND COMPUTATIONAL APPROACH		
3.1	Introduction	70
3.2	Review of literature	71
3.3	Experimental materials and methods	77
	3.3.1 Synthesis of inhibitor	77
	3.3.2 Aggressive solutions	81
	3.3.3 Preparation of metal samples	81
	3.3.4 Spectral analysis	81
	3.3.5 Gravimetric techniques	82
	3.3.6 Electrochemical techniques	82

Section	Contents	Page No.
	3.3.7 Surface morphological analysis	83
	3.3.8 Density Functional Theory (DFT)	84
3.4	Results and discussion	85
	3.4.1 Fourier transform-infrared spectroscopy (FT-IR)	85
	3.4.2 NMR and mass spectrometry	85
	3.4.3 Corrosion mitigation by mass loss method	86
	3.4.3.1 Impact of temperature on corrosion rate	87
	3.4.3.2 Activation and kinetic parameters	88
	3.4.3.3 Adsorption isotherm	90
	3.4.3.4 Thermodynamic adsorption parameters	92
	3.4.4 Electrochemical impedance spectroscopy	93
	3.4.5 Surface morphological analysis	95
	3.4.6 Quantum chemical studies	98
3.5	Mechanism of inhibition	101
3.6	Conclusions	103
3.7	References	104
CHAPTER IV		
IMPLICATIONS OF NATURAL AND SYNTHETIC INHIBITORS TO MITIGATE CORROSION IN STEEL REBAR ENTRENCHED IN CONCRETE		
	Introduction	110
4.1	4.1.1 Role of chloride ions and carbon dioxide in corrosion	111
	4.1.2 Process of corrosion in steel rebar	113
	4.1.3 Signs of corrosion in steel rebar	114
	4.1.4 Curtailing the risk of corrosion	115
4.2	Review of literature	116
4.3	Experimental materials	120
	4.3.1 Inhibitors used for the experiment	120
	4.3.2 Preparation of pore solution and working electrodes	121
4.4	Experimental methodology	121
	4.4.1 Electrochemical techniques	121
	4.4.2 Surface morphological studies	122

Section	Contents	Page No.
4.5	Results and discussions	123
	4.5.1 Electrochemical techniques	123
	4.5.2 Adsorption isotherm, surface coverage and protection efficiency	125
	4.5.3 Surface morphological studies	126
4.6	Mechanism for inhibition	127
4.7	Conclusions	128
4.8	References	129
CHAPTER V		
ENHANCEMENT OF ANTI-CORROSION PROPERTIES OF EPOXY SYSTEM WITH DISPERSED <i>Senna auriculata</i> INCORPORATED NANOCCLAY FOR MILD STEEL IN ALKALINE AND ACID ENVIRONMENTS		
5.1	Introduction	132
5.2	Review of literature	133
5.3	Materials and methods	137
	5.3.1 Preparation of inhibitor	137
	5.3.2 Preparation of SA-modified clay	137
	5.3.3 Preparation of electrolyte and working electrodes	137
	5.3.4 Preparation of coating solution	137
	5.3.5 Spectral analysis	138
	5.3.6 Electrochemical techniques	138
	5.3.7 Microscopic coating morphology	139
5.4	Results and discussion	139
	5.4.1 Gas chromatography-mass spectrometry analysis	139
	5.4.2 Infrared and UV-Visible spectroscopy analysis	139
	5.4.3 Electrochemical measurements	140
	5.4.4 Microscopic coating morphology	143
5.5	Mechanism of corrosion inhibition	143
5.6	Conclusions	144
5.7	References	145

Section	Contents	Page No.
CHAPTER VI		
THE EFFECT OF BIO COMPATIBLE INHIBITORS ON CORROSION RESISTANCE BEHAVIOUR OF TITANIUM BASED ALLOYS IN SIMULATED BODY FLUID		
6.1	Introduction	148
6.2	Review of literature	150
6.3	Experimental details	154
	6.3.1 Preparation of water extracts	154
	6.3.2 Preparation of metal specimen	154
	6.3.3 Preparation of simulated biological fluid	154
	6.3.4 Spectral analysis	155
	6.3.5 Electrochemical measurements	156
	6.3.6 Morphological analysis	156
6.4	Results and discussion	156
	6.4.1 Gas chromatography-mass spectrometry analysis	156
	6.4.2 Fourier transform-infrared spectroscopy (FT-IR)	158
	6.4.3 Electrochemical measurements	158
	6.4.4 Surface analysis	161
6.5	Conclusions	162
6.6	References	163
	CHAPTER VII - SUMMARY AND CONCLUSIONS	166
	CHAPTER VIII - SCOPE FOR FUTURE WORK	171
	PUBLICATIONS	172
