Chapter No.	Title	Page No.
<b>1</b>	<b>Introduction</b>	
	1.1 Energy storage and Batteries	1
	1.2 Solid Electrolytes	1
	1.3 Biopolymer electrolytes: An Insight	3
	1.4 Choice of the host biomass for the bio-electrolyte	4
	1.4.1 Corn-based biomass	4
	1.4.2 Seaweed-based biomass	6
	1.4.3 Plant biomass – <i>Salmalia Malabarica</i> Gum	7
	1.5 Essential Attributes of Solid Bio-Electrolyte for Electrochemical Devices	8
	1.6 Choice of salts for the bio-electrolytes	9
	1.6.1 Criteria of salt for solid bio-electrolyte	9
	1.6.2 Magnesium salt as conducting species for the bio-electrolytes	10
	1.6.3 Lithium salt as conducting species for the bio-electrolytes	10
	1.6.4 Ammonium salt as conducting species for the bio-electrolytes	10
	1.7 Ionic Transport Mechanism in Bio-Electrolyte	11
<b>2</b>	<b>Review of literature</b>	
	2.1 Ionic Transport Mechanism in Bio-Electrolyte	18
	2.2 Polymer electrolytes	19
	2.2.1 Gel polymer electrolytes	20
	2.2.2 Composite polymer electrolyte	21
	2.2.3 Biopolymers	21
	2.2.4 Synthetic biopolymer as electrolyte	22

---

<b>Chapter No.</b>	<b>Title</b>	<b>Page No.</b>
	2.2.5 Natural biopolymer as electrolyte	22
	2.3 Present developments in host materials	24
<b>3</b>	<b>Synthesis and Characterization</b>	
	3.1 Selection of the biomass	40
	3.1.1 Materials used for the work	40
	3.1.2 Blending of biomaterials for biopolymer membrane	41
	3.2 Preparation of corn silk extract (CSE) and corn silk biopolymer membrane (CSBP) from corn silk biomass	42
	3.3 Preparation of <i>Sargassum Muticum</i> Extract (SME) and <i>Sargassum Muticum</i> biopolymer membrane (SMBP) from seaweed biomass	44
	3.4 Preparation of <i>Salmalia Malabarica</i> gum (SG) and <i>Salmalia</i> gum biopolymer membrane (SGBP) from plant exudate as biomass	48
	3.5 Characterization Techniques	50
	3.5.1 Gas chromatography-mass spectrometry analysis	50
	3.5.1.1 Instrumentation	50
	3.5.1.2 Identification of compounds	50
	3.5.2 X-ray diffraction (XRD) studies	50
	3.5.3 Fourier Transform Infrared Spectroscopy (FTIR)	51
	3.5.4 Differential scanning Calorimetry (DSC)	52
	3.5.5 Linear Sweep Voltammetry (LSV)	52
	3.5.6 Transference number measurement (TNM)	52
	3.5.7 Electrochemical Impedance Spectroscopy (EIS)	53
<b>4</b>	<b>Corn silk extract-based solid- state biopolymer electrolyte and its application to electrochemical storage devices</b>	
	4.1 Investigation of CSE as solid bio-electrolyte for Mg-ion Battery	58
	4.1.1 Gas Chromatography – Mass Spectra analysis (GC-MS) of Corn Silk Extract	58

---

<b>Chapter No.</b>	<b>Title</b>	<b>Page No.</b>
	4.1.2 Preparation of the biopolymer film and biopolymer electrolyte	61
	4.1.3 X-ray Diffraction (XRD) Analysis	62
	4.1.4 Fourier Transform Infrared (FT-IR) Spectroscopy	65
	4.1.5 Differential Scanning Calorimetry (DSC)	68
	4.1.6 Linear Sweep Voltammetry (LSV)	72
	4.1.7 Transference number measurement (TNM)	73
	4.1.8 AC Impedance Spectroscopy	74
4.2	Investigation of CSE as solid bio-electrolyte for Li-ion Battery	78
	4.2.1 Preparation of the bio-electrolyte for Li-ion Battery	78
	4.2.2 X-ray Diffraction (XRD) Analysis	78
	4.2.3 Fourier Transform Infrared (FT-IR) Spectroscopy	81
	4.2.4 Differential Scanning Calorimetry (DSC)	83
	4.2.5 Linear Sweep Voltammetry (LSV)	85
	4.2.6 Transference number measurement (TNM)	86
	4.2.7 AC Impedance Spectroscopy	87
4.3	Investigation of CSE as solid bio-electrolyte for Proton Battery	90
	4.3.1 Preparation of the bio-electrolyte membrane	93
	4.3.2 X-ray Diffraction (XRD) Analysis	94
	4.3.3 Fourier Transform Infrared (FT-IR) Spectroscopy	96
	4.3.4 Differential Scanning Calorimetry (DSC)	98
	4.3.5 Linear Sweep Voltammetry (LSV)	100
	4.3.6 Transference number measurement (TNM)	101
	4.3.7 AC Impedance Spectroscopy	102
	4.3.8 Construction of a single Proton Exchange Membrane (PEM) fuel cell	106

---

---

<b>Chapter No.</b>	<b>Title</b>	<b>Page No.</b>
<b>5</b>	<b>Seaweed extract-based solid- state biopolymer electrolyte and its application to electrochemical storage devices</b>	
	5.1 Investigation of SME as solid bio-electrolyte for Mg-ion Battery	117
	5.1.1 Preparation of the bio-membrane and bio-electrolyte	117
	5.1.2 X-ray Diffraction (XRD) Analysis	119
	5.1.3 Fourier Transform Infrared (FT-IR) Spectroscopy	122
	5.1.4 Differential Scanning Calorimetry (DSC)	126
	5.1.5 Linear Sweep Voltammetry (LSV)	129
	5.1.6 Transference number measurement (TNM)	130
	5.1.7 AC Impedance Spectroscopy	131
	5.2 Investigation of SME as solid bio-electrolyte for Li-Ion Battery	134
	5.2.1 Preparation of the Sargassum bio-electrolyte for Li-ion Battery	134
	5.2.2 X-ray Diffraction (XRD) Analysis	135
	5.2.3 Fourier Transform Infrared (FT-IR) Spectroscopy	137
	5.2.4 Differential Scanning Calorimetry (DSC)	139
	5.2.5 Linear Sweep Voltammetry (LSV)	141
	5.2.6 Transference number measurement (TNM)	142
	5.2.7 AC Impedance Spectroscopy	143
	5.3 Investigation of SME as solid bio-electrolyte for a Proton Battery	146
	5.3.1 Preparation of the Sargassum bio-electrolyte for Proton Conducting Battery	146
	5.3.2 X-ray Diffraction (XRD) Analysis	147
	5.3.3 Fourier Transform Infrared (FT-IR) Spectroscopy	149
	5.3.4 Differential Scanning Calorimetry (DSC)	151
	5.3.5 Linear Sweep Voltammetry (LSV)	153

---

<b>Chapter No.</b>	<b>Title</b>	<b>Page No.</b>
	5.3.6 Transference number measurement (TNM)	154
	5.3.7 AC Impedance Analysis	155
	5.3.8 Construction of a single Proton Exchange Membrane (PEM) fuel cell	158
<b>6</b>	<b>Gum - based on solid- state biopolymer electrolytes and its application to electrochemical storage devices</b>	
	6.1 Investigation of SG as solid bio-electrolyte for ion-conducting Battery	167
	6.1.1 Preparation of the SGBP bio-membrane and its dopped bio-electrolyte	167
	6.1.2 X-ray Diffraction (XRD) Analysis	169
	6.1.2.1 XRD for magnesium chloride doped SG bio-electrolyte- SGMC 0.7	169
	6.1.2.2 XRD for lithium chloride doped SG bio-electrolyte-SGLC 0.5	172
	6.1.2.3 XRD for ammonium formate doped SG bio-electrolyte- SGAF 0.7	174
	6.1.3 Fourier Transform InfraRed Spectroscopy (FTIR)	175
	6.1.3.1 FTIR for magnesium chloride doped SG bio-electrolyte SGMC 0.7	175
	6.1.3.2 FTIR for lithium chloride doped SG bio-electrolyte SGLC 0.5	179
	6.1.3.3 FTIR for ammonium formate doped SG bio-electrolyte SGAF 0.7	181
	6.1.4 Differential Scanning Calorimetry (DSC)	183
	6.1.4.1 DSC for magnesium chloride doped SG bio-electrolyte SGMC 0.7	183
	6.1.4.2 DSC for lithium chloride doped SG bio-electrolyte SGLC 0.5	186
	6.1.4.3 DSC for ammonium formate doped SG bio-electrolyte SGLC 0.5	188

<b>Chapter No.</b>	<b>Title</b>	<b>Page No.</b>
	6.1.5 Linear Sweep Voltammetry (LSV)	189
	6.1.5.1 LSV for magnesium chloride doped SG bio-electrolyte SGMC 0.7	189
	6.1.5.2 LSV for lithium chloride doped SG bio-electrolyte SGLC 0.5	190
	6.1.5.3 LSV for ammonium formate doped SG bio-electrolyte SGLC 0.5	191
	6.1.6 Transference Number Measurement (TNM)	192
	6.1.6.1 TNM for magnesium chloride doped SG bio-electrolyte SGMC 0.7	192
	6.1.6.2 TNM for lithium chloride doped SG bio-electrolyte SGLC 0.5	193
	6.1.6.3 TNM for ammonium formate doped SG bio-electrolyte SGAF 0.7	194
	6.1.7 Electrochemical Impedance Spectroscopy (EIS)	195
	6.1.7.1 EIS for magnesium chloride doped SG bio-electrolyte SGMC 0.7	195
	6.1.7.2 EIS for lithium chloride doped SG bio-electrolyte SGLC 0.5	198
	6.1.7.3 EIS for ammonium formate doped SG bio-electrolyte SGAF 0.7	200
<b>7</b>	<b>Melezitose - based solid – state biopolymer electrolyte and its application to electrochemical storage devices</b>	
	7.1 Investigation of Melezitose as solid bio-electrolyte for Mg-Ion Battery	208
	7.1.1 Preparation of the blend solid biopolymer electrolyte MZP	210
	7.1.2 X-ray Diffraction (XRD) Analysis	210
	7.1.3 FTIR Spectra	216
	7.1.4 Differential Scanning Calorimetry (DSC)	219

Chapter No.	Title	Page No.
	7.1.5 AC Impedance Spectroscopy	220
<b>8</b>	<b>Fabrication of ion-conducting battery using prepared bio-electrolytes and comparison</b>	
	8.1 Fabrication of ion-conducting battery	227
	8.1.1 Fabrication of a Magnesium-Ion Conducting battery	227
	8.1.2 Fabrication of a Lithium-Ion Conducting Battery	228
	8.2 Comparison of batteries developed from Corn Silk Biomass/PVA	230
	8.2.1 Fabrication of Mg-Ion Conducting Battery from Corn Silk Biomass/PVA dopped with Magnesium Chloride	233
	8.2.2 Fabrication of Li-Ion Conducting Battery from Corn Silk Biomass/PVA dopped with Lithium Chloride	234
	8.2.3 Fabrication of Proton Conducting Battery from Corn Silk Biomass/PVA dopped with Ammonium Formate	234
	8.3 Comparison of batteries from seaweed <i>Sargassum Muticum</i> Biomass	231
	8.3.1 Fabrication of Mg-Ion Conducting Battery from <i>Sargassum Muticum</i> Biomass/PVA dopped with Magnesium Chloride	236
	8.3.2 Fabrication of Li-Ion Conducting Battery from <i>Sargassum Muticum</i> Biomass/PVA dopped with Lithium Chloride	236
	8.3.3 Fabrication of Proton Conducting Battery from <i>Sargassum Muticum</i> Biomass/PVA dopped with Ammonium formate	235
	8.4 Comparison of batteries from plant gum <i>Salmalia Malabarica</i> -Biomass	235
	8.4.1 Fabrication of Mg-Ion Conducting Battery from <i>Salmalia Malabarica</i> Biomass/PVA dopped with Magnesium Chloride	237

---

<b>Chapter No.</b>	<b>Title</b>	<b>Page No.</b>
	8.4.2 Fabrication of Li-Ion Conducting Battery from <i>Salmalia Malabarica</i> Biomass/PVA dopped with Lithium Chloride	237
	8.4.3 Fabrication of Proton Conducting Battery from <i>Salmalia Malabarica</i> Biomass/PVA dopped with Ammonium formate	238
	8.5 Comparison of Mg-ion conducting Battery of Corn Silk, <i>Sargassum Muticum</i> , and <i>Salmalia Malabarica</i> – Biomasses	238
	8.6 Comparison of Li-ion conducting Battery of Corn Silk, <i>Sargassum Muticum</i> , and <i>Salmalia Malabarica</i> – Biomasses	240
	8.7 Comparison of Proton conducting Battery of Corn Silk, <i>Sargassum Muticum</i> , and <i>Salmalia Malabarica</i> - Biomasses	242
<b>9</b>	<b>Summary, Conclusions and Future Work</b>	
	Future prospects	254
	<b>List of Publications</b>	

---
